

Everything the vendor portal gives your business

Plans built on what you offer, bookings, products by Tanova OS, guests, finance, AI tools, translation into any language, public service pages and an API, in one portal that keeps every business separate and every payment on the record.

What is inside

How to read this guide

Each section names the menu where a feature lives, what it does, and what you can do with it. Menu names match the portal's sidebar. Adding listings needs an active plan that covers the OS; everything else works whatever your plan status.

1	Your account, your plan and your team	Sign up your company, choose what you offer and a plan, add your employees and check you are ready to take bookings.
2	Running the day	The screens a tour operator or lodge opens every morning.
3	Bookings and guests	Every booking has one page where the whole trip is run.
4	Your products, by Tanova OS	Everything you sell, grouped by the kind of business it belongs to, with an editor for each.
5	Languages: sell in more than one	A small dedicated dashboard to write your services in other languages, by hand or with AI, so guests read them in their own.
6	Your public service pages	Every published service has a public page you can share, in one design for hotels, tours, spaces, cars, boats and events.
7	Tanova AI: trips, itineraries and conversations	Tools that connect your business to travellers and to AI assistants.
8	Marketing: growing repeat business	Tools to stay in touch with guests without a marketing team.
9	Finance: TourPay	One place to bill, get paid, pay suppliers and see what a trip earned.
10	Reports	Numbers that are only yours.
11	Integrations	One hub for the other systems you use, in eight categories.
12	Your website and apps: the API	Everything above is also available to your own website, app or back office.
13	Safety, privacy and reliability	Your business is separate from every other business, and your money is recorded in a way that can be checked.
.	Quick reference: the whole sidebar	Every menu at a glance.

SECTION 1

Your account, your plan and your team

Sign up your company, choose what you offer and a plan, add your employees and check you are ready to take bookings.

Sign up your company

SIGN-UP PAGE

Signing up creates your company and makes you its owner. It takes four short steps.

- About you: name, phone and email. Your company: its name, country, city and address.
- What does your company offer? Pick every kind of business you run: Stay OS (lodges, hotels, guest houses, villas), Exp OS (tours, guides, experiences), Trans OS (transfers, car hire, boats), Event OS, Airline OS or Visa OS.
- Choose your plan. The cheapest plan that covers your choice is recommended, and plans that cannot cover it are dimmed.
- A strong password, then your email is verified before you start.
- A free 30-day trial of the plan you chose begins at once, with no card, so you can add listings straight away. Then add your own employees as staff (see Team).

Plan and billing

COMPANY › PLAN & BILLING (ALSO THE PLAN CHIP IN THE TOP BAR)

One page for your plan, what you operate, what you have used and what you owe. It replaces the old My Subscription and My Plans.

- Four plans, priced in US dollars a month (a year costs ten months): Hana \$19 (one OS of your choice, 2 staff), Liam \$49 (any 3 OS, 5 staff), Kuda \$79 (any 4 OS, 10 staff), Hina \$149 (every OS, unlimited staff). Listings per type are capped on the smaller plans and unlimited on Hina.
- What you operate: tick which Tanova OS your plan covers and change it whenever you like. Your menu and what you can create follow this list.
- Extra OS: on Hana, Liam or Kuda you can add another OS on top (\$12, \$10 or \$8 a month). It is free during the trial and charged for the days left afterwards.
- What you have used: listings per type and staff seats, with bars. Reaching a limit stops you adding more, never your bookings, payments or customers.
- Pay for a plan: choose it and place an order. You get a reference and the platform's payment details, and the plan starts as soon as the platform team confirms your payment. Renewing adds to the end of your current period; a change of plan starts at once.
- You are emailed 7, 3 and 1 day before a trial or plan ends, and the day after. Dining, Tanova AI, TourPay and reports come with every plan.

Profile, security and verification

COMPANY › VERIFICATIONS › TWO-FACTOR › PROFILE MENU

Keep the business details guests and the platform see up to date, and protect the account.

- Business profile and contact details.
- Two-factor sign-in with a QR code and recovery codes.
- Phone-code and identity verification, so guests and the platform can trust the listing.
- Change or permanently delete your account.

Team: your employees

HOME › TEAM

Add your employees as staff. Every staff member belongs to your company alone. The number of seats depends on your plan.

- Enter a name, an email and tick the parts of the portal they may use: bookings and check-in, customers, catalogue, finance, marketing, reports, Tanova. Today and the dashboard are always included.
- They get an email to choose their own password and join. They see only your company's things and can never open your plan, API keys, integrations, payouts or team settings, or the platform admin.
- Change what someone can open, send an invitation again, or remove them at any time; removal ends their access at once.
- When every seat on your plan is used, adding someone is refused until you remove a person or move to a bigger plan.
- Everything they do is recorded against their name.

Go Live checklist and Operations Manual

COMPANY › GO LIVE › HELP

A short list of what is left before you launch, and a manual written for the portal's own screens.

- Checklist: publish at least one experience, list on the Tanova marketplace, define a pricing tier, set up a scheduled message.

Running the day

The screens a tour operator or lodge opens every morning.

Today

OVERVIEW › TODAY

One board for the day.

- Arrivals, departures and guests currently in the house for any date, with quick counts.
- A look ahead at the next seven days.

Check-In

BOOKINGS › CHECK-IN

Mark each booking as it moves through the trip.

- Expected, checked in, checked out or no-show, with the number of guests who came.
- Search and filter by state.

Departures and seats

BOOKINGS › DEPARTURES & SEATS

For fixed-departure tours.

- Set the days a tour departs and how many people it takes.
- See how many have booked and how many seats are free; the booking engine reads the same numbers.
- A tour with no departures set takes bookings on any date.

Waitlist

BOOKINGS › WAITLIST

Capture demand for sold-out dates.

- Record interest against a service and date, then notify or convert people when space frees up.

Bookings and guests

Every booking has one page where the whole trip is run.

Bookings list

BOOKINGS › BOOKINGS › BOOKING HISTORY

All bookings for your business, and nobody else's.

- Search, filter by status, service type and date, and sort.

The booking page

BOOKINGS › (OPEN A BOOKING)

One screen for everything about a trip.

- Travellers: names, dates of birth, nationality, passport numbers, dietary needs, notes; a lead traveller.
- A private link (no login) for the customer to tell you who is travelling; you are told when they submit it.
- Payments and schedule: record money received or refunded, build a deposit-and-balance or instalment plan. The status follows the money.
- Add-ons and upsells attached to the booking, with the total updating.
- A quote thread: counter-offers back and forth until one is accepted.
- Documents you attach, visible to the customer if you choose.
- A timeline of notes, calls, e-mails and messages.
- A trip brief e-mailed to the guest, with your own note.
- One click to raise an invoice for the booking.

Enquiries

BOOKINGS › ENQUIRY REPORT

Questions guests send from your listings.

- Read, reply and manage enquiries in one place.

Customers (your CRM)

BOOKINGS › CUSTOMERS

Built from your bookings, and yours to curate.

- How many times they have booked and how much they have spent.
- Notes, tags, passport and nationality; add walk-ins by hand.
- Filter for repeat customers, sort by spend.

Your products, by Tanova OS

Everything you sell, grouped by the kind of business it belongs to, with an editor for each. You see the OS you operate; the others are offered once under Add to your plan. Adding a listing needs an active plan and the OS that covers it.

Stay OS: hotels, rooms and spaces

PRODUCTS › STAY OS › HOTELS & ROOMS › SPACES

Hotels, lodges and other places to stay.

- Hotels with rooms, availability and pricing, nearby places, location and iCal sync.
- Spaces with pricing, availability and iCal.

Exp OS: tours and experiences

PRODUCTS › EXP OS › TOURS › DEPARTURES

The full tour editor.

- Content, gallery, map location, pricing and person types, day-by-day itinerary, what is included and excluded, attributes and categories.
- Availability calendar and departures, and an iCal feed to keep other calendars in step.
- A Tanova tab controls whether AI assistants can discover the tour.
- Deleted tours can be recovered.

Trans OS: cars and boats

PRODUCTS › TRANS OS › CARS › BOATS

Vehicles and boats.

- Content, location, pricing and availability for each.

Event OS

PRODUCTS › EVENT OS › EVENTS

Events and ticketed experiences with their own listings, location and pricing.

Airline OS

PRODUCTS › AIRLINE OS › FLIGHTS

Airlines, airports, seat types and schedules.

Visa OS

PRODUCTS › VISA OS › VISAS

Visa types and application forms.

- Define visa types and build the form applicants fill in.

Add another OS

PRODUCTS › ADD TO YOUR PLAN › COMPANY › PLAN & BILLING

A kind of business your plan does not cover yet.

- Shown once, muted, with a plus sign. It takes you to Plan & billing to add it as an extra or move to a bigger plan.
- The API and the create screens enforce the same rule, so a lodge cannot create a tour unless it operates Exp OS.

Pricing tiers

PRODUCTS › PRICING & ADD-ONS

Markup rules for different audiences.

- Define tiers and apply them to services.

Upsells and add-ons

PRODUCTS › PRICING & ADD-ONS

The extras you sell on top: photography, transfers, equipment.

- Set which services each add-on is offered on, and its price.
- Attach add-ons to a booking from its page.

Meals and Restaurants

TANOVA AI › MEALS & DINING › RESTAURANTS

The food side of an itinerary, available on every plan.

- A meals catalogue of your own.
- Restaurant partners you curate, alongside restaurants discovered from OpenStreetMap.

Languages: sell in more than one

A small dedicated dashboard to write your services in other languages, by hand or with AI, so guests read them in their own.

The language dashboard

HOME › LANGUAGES

Every service you have, as text: your default-language words on the left, a box for the translation on the right.

- Tabs for each language, a progress bar for it, and a count per kind of service (hotels, hotel rooms, tours, spaces, cars, boats, events). Search, and show only what is still to do.
- Covers title, short and full description, itinerary, what is included and not included, questions and answers, hotel policies, boat specifications, nearby places, cancellation policy and terms. Lists are translated word by word and keep their pictures and settings.
- Descriptions are shown as plain text and saved back as paragraphs. A Copy button drops the original in for you to edit.
- Anything you leave empty stays in the default language, so a half-translated service never shows blank text. A name that reads the same in the other language counts as translated once you have said so.
- Only the kinds of service your plan covers appear, and only your own company's services.

Translate with AI

HOME › LANGUAGES › TRANSLATE WITH AI

Let AI write a language for everything not translated yet.

- Translate all of one kind, or everything, into the language you are on. A spinner, a progress bar and the names of the services being worked on show as it goes; it works a few at a time and you can stop whenever you like, and what was done is saved.
- It only fills what is missing. It never replaces words you wrote yourself, and it never touches your original text.
- When it finishes you are asked to read the translations over and edit anything. If the translation service is busy or out of credit, the page says so and nothing is left half-written.

Add a language

HOME › LANGUAGES › + ADD A LANGUAGE

Choose from a list of 46 real languages, including Swahili, Portuguese, French, Arabic, Shona, Zulu, Afrikaans and Chichewa.

- An added language is available across the platform, so guests can be served in it. The words around a service page (buttons, headings) are written for it automatically.

Your public service pages

Every published service has a public page you can share, in one design for hotels, tours, spaces, cars, boats and events.

What a guest sees

THE VIEW LINK ON ANY LISTING · THE PAGE ADDRESS

A clean page anyone can open with the link, no account needed.

- A photo mosaic with a full-screen viewer, the title, place, rating and price, and a Share button.
- Facts at a glance (duration, group size, beds, passengers), then an About section, what is included, the itinerary, rooms and rates for hotels, amenities, specifications, policies, questions and answers, a map with nearby places, reviews and similar services.
- A sticky booking box with dates, guests and availability, and on phones a bar with the price and one button. It uses the same booking flow and payments as before.
- Only your company's name is shown: never your email, phone or profile.

Languages on the page

LANGUAGE SWITCH AT THE TOP OF THE PAGE

A guest can read the page in any language you have translated.

- The description, itinerary, questions and the rest come from your translations, and the buttons, headings and the booking box are in the language too.
- The choice is remembered for the next service page and can be shared in a link. Your portal and edit screens always stay in your default language, so you never edit translated text by mistake.

Drafts stay private

PREVIEW BANNER

A service that is not published is not found by guests.

- Guests, customers and other companies get a not-found page. You, your staff and the platform team see it with a Preview, not published banner, and it is never indexed by search engines.
- The list pages and the whole portal stay behind sign-in; only the service pages, their booking box and the language switch are open, and they are rate limited so an address cannot hammer them.

Tanova AI: trips, itineraries and conversations

Tools that connect your business to travellers and to AI assistants.

Tanova trips

TANOVA AI › TANOVA AI

Trips planned for your guests, by you or by the marketplace.

- Generate a trip for a guest, choose a package, and turn it into a booking or an invoice.
- Trips that AI assistants plan for your business appear here too, and are yours to open, adjust and convert.
- New trips stay on the dashboard for a set window, then unbooked ones are cleared.

Marketplace

TANOVA AI › MARKETPLACE

Choose which of your experiences AI assistants can find and book.

- Switch listings on or off.

AI requests and Inbox

TANOVA AI › INBOX

One inbox for marketplace conversations and your own concierge.

- Marketplace bookings with the traveller-to-operator message thread.
- Reply by e-mail, or by WhatsApp once you have connected WhatsApp Cloud in Integrations. Press Draft with AI and edit the draft before sending.

Itinerary Builder

TANOVA AI › ITINERARY BUILDER

Plan trips day by day.

- Write an itinerary by hand, or generate one with AI and edit it.
- Warnings rather than hard errors, so a draft can stay half-finished.

Concierge

TANOVA AI › CONCIERGE

Your own AI chatbot for your business.

- Set it up for your website, follow conversations and close them, see statistics.
- The same concierge is available through the API.

AI Planning

COMPANY › AI PLANNING

Preferences that steer how the AI plans and answers for your business.

Operators

COMPANY › OPERATORS

A directory of your suppliers.

- Record operators with their routes and fares.

SECTION 8

Marketing: growing repeat business

Tools to stay in touch with guests without a marketing team.

Loyalty

MARKETING › LOYALTY

Reward returning guests.

- Tiers by points threshold; grant or redeem points per customer; tiers re-evaluate automatically.

Scheduled messages

MARKETING › SCHEDULED MESSAGES

Automatic messages around a trip.

- Pre-trip, departure, review and occasion messages, sent daily from your own account: by e-mail, and by WhatsApp once connected.
- Switch each on or off.

Occasions and Holiday Greetings

MARKETING › OCCASIONS › HOLIDAY GREETINGS

The personal touch at scale.

- Birthdays and anniversaries per customer.
- A shared calendar of holidays greeted to many customers at once.

Email Campaigns

MARKETING › EMAIL CAMPAIGNS

Bulk e-mail to your own customers.

- Send to all, past or upcoming customers; sending runs in the background. Recipients come only from your own bookings.

Coupons

MARKETING › COUPON

Discount codes for your services.

- Create, edit and delete coupons, and choose the services each applies to.

News

MARKETING › MANAGE NEWS

Publish stories and updates on your listing.

SECTION 9

Finance: TourPay

One place to bill, get paid, pay suppliers and see what a trip earned.

Invoices and quotations

MONEY › TOURPAY

Professional documents in minutes.

- Invoices, quotations and credit notes with your own numbering, named taxes (inclusive or exclusive), discounts and terms.
- Start typing a client or an item and the form suggests your customers, past clients, tours, stays, add-ons and lines you billed before, with prices.
- Duplicate, void (an issued document is never deleted), share by link, download as PDF, send by e-mail, or by WhatsApp once connected.
- A quotation the guest can accept or decline on their own link, then converted to one invoice.
- Invoice straight from a booking or a Tanova trip.

Getting paid

MONEY › TOURPAY › SETTINGS › GETTING PAID

Guests pay you directly, through your own accounts.

- Pay Now through Stripe, PayPal, Paystack, Paynow (Zimbabwe), Pesapal or Selcom (Tanzania). The money goes to you, never through the platform; keys are stored encrypted and never shown again.
- Only the methods that can take the invoice's currency are offered.
- Bank transfer: the guest reports it with a reference and proof; it counts only when you confirm it.
- Payments are recorded only when the provider confirms them, once, even if the guest closes the tab.
- Deposit and balance or equal instalments; receipts by e-mail.

Multi-currency

MONEY › TOURPAY › SETTINGS › CURRENCIES

Bill in several currencies.

- One currency per invoice; currencies are never mixed.
- Set your own base currency and rates; otherwise a free daily exchange-rate feed is used.

Reminders

MONEY › TOURPAY › SETTINGS › REMINDERS

Chase late payments politely.

- Off until you switch them on. Before the due date, then every few days when overdue, capped, never twice a day; by e-mail, or WhatsApp once connected.

Reports

MONEY › TOURPAY › REPORTS

Answers, and CSV for your accountant.

- Who owes you, by how late.
- Money in by month, tax collected, client statements, profit by booking.

Supplier bills and profit

MONEY › TOURPAY › BILLS

What you owe the people who deliver the trip.

- Record supplier bills, link them to a booking, record payments.
- A profit card on every booking.

Statement

MONEY › STATEMENT

One running account.

- Every invoice paid, booking payment, payout and expense, per currency with a running balance and CSV download.
- Money the platform collected for you shows as held until it is paid out; commission owed on money you collected yourself is shown separately.

Wallet and payouts

MONEY › MY WALLET › PAYOUTS

Platform credit and earnings.

- Buy wallet credit.
- Request payouts of money the platform holds for you, when payouts are enabled.

Settings and activity trail

MONEY › TOURPAY › SETTINGS

A proper settings page.

- Numbering and defaults, bank details, receipts, a test button per gateway.
- An activity trail of who recorded, confirmed, refunded, voided or changed what, and when.

SECTION 10

Reports

Numbers that are only yours.

Analytics

REPORTS › ANALYTICS

How the business is doing.

- How full your tours are over the next 30 days.
- Revenue and bookings over the last 12 months, by status and by service type.

Trending and bestsellers

REPORTS › TRENDING & BESTSELLERS

What sells, with your own picks on top.

Booking Report

REPORTS › BOOKING REPORT

A report of bookings for a period.

SECTION 11

Integrations

One hub for the other systems you use, in eight categories. Your credentials are yours alone and stored encrypted.

What is active today

COMPANY › INTEGRATIONS

Three integrations are connected to features of the portal.

- WhatsApp Cloud: sends invoices, payment reminders, scheduled messages and inbox replies from your own WhatsApp number. Connect it once; Test connection asks WhatsApp to confirm it.
- Wetu: browse your Wetu itineraries, refresh them and import one as a Tanova trip.
- Fiscalize: fiscal-compliance credentials.

The rest of the hub

COMPANY › INTEGRATIONS

Saved securely, not used yet.

- Airbnb, Booking.com, Expedia, GetYourGuide, Viator, OpenStreetMap, Google Maps, Amadeus, Sabre, HubSpot, Pipedrive, Mailchimp, Flutterwave, M-Pesa, EcoCash, Twilio, SendGrid, Mailgun, Claude AI, KRA iTax and TRA Tanzania can store your credentials, and their cards say the portal does not use them yet.
- Invoice payments are not set up here: use Money › TourPay › Settings › Getting paid.

Your website and apps: the API

Everything above is also available to your own website, app or back office.

API keys

COMPANY › API KEYS

Publishable and secret keys, in test or live mode.

- Scopes let a key do only what it needs.
- Allowed origins decide which websites may use a publishable key.
- Rotate or revoke a key at any time; test mode never touches live data.

API and Website Docs

COMPANY › API & WEBSITE DOCS

Interactive documentation, always current.

- 215 operations: services, bookings, invoices, customers, loyalty, messages, suppliers, supplier bills, concierge, waitlist, departures, add-ons, analytics, occasions and more.
- Swagger UI, an OpenAPI file, a Postman collection and guides.
- Safe retries with idempotency keys, clear rate limits and consistent errors. The API applies your plan's rules to creating listings: the plan's Tanova OS and its limits.

Services in any language

ANY SERVICE ENDPOINT

Ask for a language and get your services in it.

- Send `lang=fr`, or an `Accept-Language` header such as `fr-CA,fr;q=0.9`. Tours, hotels (with their rooms), cars, boats, events, the compact listing and the app catalogue come back with the translated title, description, FAQs, itinerary and the rest.
- Where something is not translated it stays in your default language, never blank. Every record says which language its text is in and which others it has, so an app can offer a language switch only where it works.
- `lang=all` keeps the default text and adds every translation under translations.

Webhooks

COMPANY › API KEYS › WEBHOOKS

Be told the moment something happens.

- Booking created, confirmed, paid, cancelled and completed, payment received, refund recorded, travellers submitted, customer created, invoice created, paid and voided.
- Failed deliveries are retried after 1 minute, 5 minutes, 30 minutes, 2 hours and 12 hours.

SECTION 13

Safety, privacy and reliability

Your business is separate from every other business, and your money is recorded in a way that can be checked.

Your data is yours alone

EVERYWHERE

Every list, report and API call is limited to your own business, and each kind of account stays in its own area of the portal.

One ledger for money

FINANCE

Every payment, refund, supplier payment and payout is written once and never changed.

- A booking, its invoice, the statement and your payout balance always show the same money.
- The ledger is tamper-evident: an entry changed or removed behind the system's back is detected.
- The books are checked every night, and the platform's health check turns red if anything differs.
- Two payments arriving at once are counted one after the other, and a payment that would overpay is refused.

Your company, your staff and the platform stay in their own areas

EVERYWHERE

A customer, a vendor, a company employee and the platform team each see only their own area, and a page that is nobody's is refused.

- Staff work as your company but only in the parts you tick, and never in owner-only pages.
- A service page that is not published is not found by anyone but its owner, staff and the platform team; public pages show no owner contact details.

Credentials and keys

EVERYWHERE

Gateway keys and integration credentials are stored encrypted and never shown again; API keys are shown once.

Backups

PLATFORM

The database is backed up every night, with the latest seven kept.

Quick reference: the whole sidebar

Home	Dashboard · Today · Team (staff) · Languages
Bookings	Bookings · Departures (with Exp OS) · Check-In · Waitlist · Customers · Enquiry Report
Products	One group per OS you operate: Stay OS (Hotels & rooms, Spaces) · Exp OS (Tours) · Trans OS (Cars, Boats) · Event OS (Events) · Airline OS (Flights) · Visa OS (Visas) · Pricing & Add-ons · Add to your plan
Tanova AI	Tanova AI · Marketplace · Itinerary Builder · Concierge · Inbox · Meals & Dining · Restaurants
