

Everything the vendor portal gives your business

Bookings, catalogue, guests, finance, AI tools, integrations and an API, in one portal that keeps every business separate and every payment on the record.

What is inside

How to read this guide

Each section names the menu where a feature lives, what it does, and what you can do with it. The menu names match the portal's sidebar. Some catalogue types depend on your subscription plan.

1	Your account and getting started	Everything a business does first: sign in safely, prove who you are, choose a plan, invite your team and check you are ready to take bookings.
2	Running the day	The screens a tour operator or lodge opens every morning: who arrives, who leaves, who is in the house, and who is still waiting for a seat.
3	Bookings and guests	Every booking has one page where the whole trip is run: who is travelling, what is paid and due, the extras, the conversation, the documents.
4	Your catalogue	Everything you sell, with the same care whether it is a tour, a room, a car or a visa.
5	Tanova: AI, itineraries and conversations	The Tanova tools connect your business to travellers and to AI assistants, and help you plan and answer faster.
6	Growing repeat business	Tools to stay in touch with guests without a marketing team.
7	Finance: TourPay	One place to bill, get paid, pay suppliers and see what a trip actually earned.
8	Insights	Numbers that are only yours: every query is limited to your business.
9	Integrations	One hub for the other systems you use, with the same look for every category.
10	Your website and apps: the API	Everything above is also available to your own website, app or back office, so the portal can be the engine behind your brand.
11	Safety, privacy and reliability	Your business is separate from every other business on the platform, and your money is recorded in a way that can be checked.
.	Quick reference: the whole sidebar	Every menu at a glance.

SECTION 1

Your account and getting started

Everything a business does first: sign in safely, prove who you are, choose a plan, invite your team and check you are ready to take bookings.

Profile, security and verification

PROFILE · VERIFICATIONS · TWO-FACTOR

Keep the business details guests and the platform see up to date, and protect the account.

- Business profile and contact details.
- Two-factor sign-in with a QR code and recovery codes.
- Phone-code verification and identity verification, so guests and the platform can trust the listing.
- Change or permanently delete your account.

Subscription and plans

SETTINGS › MY SUBSCRIPTION · MY PLANS

See the plan you are on, what it includes, and move to another.

- Compare plans and upgrade or renew from the portal.
- A grace period after expiry, so a late renewal does not switch your business off overnight.
- Vendor upgrade for people who started as guests.

Team

SETTINGS › TEAM

Give colleagues their own access instead of sharing one password.

- Invite people by e-mail, re-send an invitation, edit or remove a member.
- Invitations are private to your business: nobody can see or accept another business's invitation.

Go Live checklist and Operations Manual

SETTINGS › GO LIVE · HELP

A short list that tells you what is left before you launch, and a manual written for the portal's own screens.

- Checklist: publish at least one experience, list on the Tanova marketplace, define a pricing tier, set up a scheduled message.
- The Operations Manual explains each part of the portal in plain language.

Running the day

The screens a tour operator or lodge opens every morning: who arrives, who leaves, who is in the house, and who is still waiting for a seat.

Today

OVERVIEW › TODAY

One board for the day.

- Arrivals, departures and guests currently in the house for any date, with quick counts.
- A look ahead at the next seven days.

Check-In

BOOKINGS › CHECK-IN

Mark each booking as it moves through the trip.

- Expected, checked in, checked out or no-show, with the number of guests who actually came.
- Search and filter by state, so a busy arrivals list stays manageable.

Departures and seats

BOOKINGS › DEPARTURES & SEATS

For fixed-departure tours: which days a tour runs and how full it is.

- Set the days a tour departs and how many people it takes.
- See how many have booked and how many seats are still free; the booking engine and the tour's calendar read the same numbers.
- A tour with no departures set takes bookings on any date.

Waitlist

BOOKINGS › WAITLIST

Capture demand for sold-out dates.

- Record interest against a service and date, then notify or convert people when space frees up.

Bookings and guests

Every booking has one page where the whole trip is run: who is travelling, what is paid and due, the extras, the conversation, the documents.

Bookings list

BOOKINGS › BOOKINGS › BOOKING HISTORY

All bookings for your business, and nobody else's.

- Search, filter by status or service type and date, and sort.
- Open any booking to run it.

The booking page

BOOKINGS › (OPEN A BOOKING)

One screen for everything about a trip.

- Travellers: names, dates of birth, nationality, passport numbers, dietary needs, notes; mark a lead traveller.
- A private link (no login) that the customer opens to tell you who is travelling; you are told when they submit it.
- Payments and schedule: record money received or refunded, build a deposit-and-balance or instalment plan, see the balance. The status follows the money.
- Add-ons and upsells attached to the booking, with the total updating automatically.
- A quote thread: counter-offers back and forth until one is accepted, which sets the agreed amount.
- Documents you attach, visible to the customer if you choose.
- A timeline of notes, calls, e-mails and messages about the booking.
- A trip brief e-mailed to the guest, with your own note.
- One click to raise an invoice for the booking (see Finance).

Enquiries

BOOKINGS › ENQUIRY REPORT

Questions guests send from your listings.

- Read, reply and manage enquiries in one place.

Customers (your CRM)

BOOKINGS › CUSTOMERS

Built automatically from your bookings, and yours to curate.

- Who they are, how many times they have booked, how much they have spent, first and last booking.
- Notes, tags, passport and nationality; add walk-ins by hand.
- Filter for repeat customers, sort by spend.

SECTION 4

Your catalogue

Everything you sell, with the same care whether it is a tour, a room, a car or a visa. Each type has its own editor; the unified Catalogs screen shows them together.

Exp OS: tours and experiences

CATALOG › ACTIVITIES

The full tour editor.

- Content, gallery, location on a map, pricing and person types, day-by-day itinerary, what is included and excluded, attributes and categories.
- Availability calendar and departures, and an iCal feed to keep other calendars in step.
- A Tanova tab controls whether AI assistants can discover the tour.
- Deleted tours can be recovered.

Stay OS: hotels and spaces

CATALOG › STAYS

Hotels, lodges and other places to stay.

- Hotels with rooms, room availability and pricing, nearby places, location and iCal sync.
- Spaces (apartments, villas, unique stays) with pricing, availability and iCal.

Trans OS and Airline OS

CATALOG › TRANSPORT

Vehicles, boats and flights.

- Cars and boats: content, location, pricing, availability, include/exclude for boats, iCal for cars.
- Flights: airlines, airports, seat types and flight schedules.

Event OS

CATALOG › ACTIVITIES

Events and ticketed experiences with their own listings, location and pricing.

Visa OS

CATALOG › ACCESS

Visa types and application forms.

- Define visa types and build the form applicants fill in.

Meals and Restaurants

CATALOG › DINING

The food side of an itinerary.

- A meals catalogue of your own.
- Restaurant partners you curate, alongside restaurants discovered from OpenStreetMap.

All catalogs

CATALOG › CATALOGS

One read-only view of what an itinerary can reference.

- Tabs for tours, hotels, meals and restaurants, each linking to the one screen that owns those records.

Pricing tiers

CATALOG › PRICING & ADD-ONS

Markup rules for different audiences.

- Define tiers and apply them to services.

Upsells and add-ons

CATALOG › PRICING & ADD-ONS

The extras you sell on top: photography, transfers, equipment.

- Set which services each add-on is offered on, and its price.
- Attach add-ons to a booking from its page.

Tanova: AI, itineraries and conversations

The Tanova tools connect your business to travellers and to AI assistants, and help you plan and answer faster.

Marketplace

TANOVA › MARKETPLACE

Choose which of your experiences AI assistants can find and book.

- Switch listings on or off, individually or by filter.

AI requests and Inbox

TANOVA › INBOX

One inbox for conversations from the marketplace and your own concierge.

- Marketplace bookings with the traveller-to-operator message thread.
- Reply by e-mail or WhatsApp, or press Draft with AI and edit the draft before sending.
- Start a conversation from any booking.

Itinerary Builder

TANOVA › ITINERARY BUILDER

Plan trips day by day.

- Write an itinerary by hand, or generate one with AI and then edit it.
- Warnings rather than hard errors, so a draft can stay half-finished.
- Packages, moving activities between days, and turning a trip into an invoice.

Concierge

CONCIERGE (TOP BAR)

Your own AI chatbot for your business.

- Set it up for your website, follow conversations and close them, and see statistics.
- The same concierge is available through the API for your own site or app.

AI Planning

SETTINGS › AI PLANNING

Preferences that steer how the AI plans and answers for your business.

Operators

SETTINGS › OPERATORS

A directory of your suppliers.

- Record operators with their routes and fares; connect them through the Integrations hub.

SECTION 6

Growing repeat business

Tools to stay in touch with guests without a marketing team.

Loyalty

ENGAGE › LOYALTY

Reward returning guests.

- Create tiers by points threshold, grant or redeem points per customer; tiers re-evaluate automatically.

Scheduled messages

ENGAGE › SCHEDULED MESSAGES

Automatic messages around a trip.

- Pre-trip, departure, review and occasion messages, sent daily on your own connected channel.
- Switch each on or off.

Occasions and Holiday Greetings

ENGAGE › OCCASIONS › HOLIDAY GREETINGS

The personal touch at scale.

- Birthdays and anniversaries per customer.
- A shared calendar of holidays greeted to many customers at once.

Email Campaigns

ENGAGE › EMAIL CAMPAIGNS

Bulk e-mail to your own customers.

- Send to all, past or upcoming customers; sending runs in the background. Recipients come only from your own bookings.

Coupons

ENGAGE › COUPON

Discount codes for your services.

- Create, edit and delete coupons, and choose the services each applies to.

News

ENGAGE › MANAGE NEWS

Publish stories and updates on your listing.

SECTION 7

Finance: TourPay

One place to bill, get paid, pay suppliers and see what a trip actually earned. It is a complete invoicing module for travel, built into the portal.

Invoices and quotations

FINANCE › TOURPAY

Professional documents in minutes.

- Invoices, quotations and credit notes with your own numbering, several named taxes (inclusive or exclusive), discounts and terms.
- Start typing a client or an item and the form suggests your customers, past clients, tours, stays, add-ons and lines you billed before, with prices.
- Duplicate, void (never delete an issued document), share by link, download as PDF, send by e-mail or by your own WhatsApp.
- A quotation the guest can accept or decline on their own link, expiring on a date, then converted to one invoice.
- Invoice straight from a booking: it carries the trip, add-ons, fees and what is already paid.

Getting paid

FINANCE › TOURPAY › SETTINGS › GETTING PAID

Guests pay you directly, through your own accounts.

- Pay Now through Stripe, PayPal, Paystack, Paynow (Zimbabwe), Pesapal or Selcom (Tanzania). The money goes to you, never through the platform; your keys are stored encrypted and are never shown again.
- Only the methods that can take the invoice's currency are offered.
- Bank transfer: the guest reports their transfer with a reference and proof; it counts only when you confirm it.
- Payments are recorded only when the provider confirms them, once, even if the guest closes the tab.
- Deposit and balance or equal instalments; the guest can pay just the next one. Receipts by e-mail.

Multi-currency

FINANCE › TOURPAY › SETTINGS › CURRENCIES

Bill in several currencies.

- One currency per invoice; each currency is kept on its own and never mixed.
- Set your own base currency and rates for totals; otherwise a free daily exchange-rate feed is used.

Reminders

FINANCE › TOURPAY › SETTINGS › REMINDERS

Chase late payments politely.

- Off until you switch them on. Before the due date, then every few days when overdue, capped, never twice a day; by e-mail or WhatsApp.

Reports

FINANCE › TOURPAY › REPORTS

Answers, and CSV for your accountant.

- Who owes you, by how late (30, 60, 90 days).
- Money in by month, tax collected, client statements, profit by booking.

Supplier bills and profit

FINANCE › TOURPAY › BILLS

What you owe the people who deliver the trip.

- Record supplier bills, link them to a booking, record payments.
- A profit card on every booking: what the client is billed less what suppliers charge.

Statement

FINANCE › STATEMENT

One running account.

- Every invoice paid, every booking payment, every payout the platform made to you and every expense, per currency with a running balance, opening balance and CSV download.
- Money the platform collected for you shows as held until it is paid out.
- Commission owed to the platform on money you collected yourself is shown separately, per currency.

Wallet and payouts

FINANCE › MY WALLET › PAYOUTS

Platform credit and earnings.

- Buy wallet credit.
- Request payouts of money the platform holds for you, when payouts are enabled; the balance counts only money actually held, up to your share.

Settings and activity trail

FINANCE › TOURPAY › SETTINGS

A proper settings page, not pop-ups.

- Invoice numbering and defaults, bank details, receipts, gateways with a test button per gateway.
- An activity trail of who recorded, confirmed, refunded, voided or changed what, and when.

SECTION 8

Insights

Numbers that are only yours: every query is limited to your business.

Analytics

INSIGHTS › ANALYTICS

How the business is doing.

- How full your tours are over the next 30 days.
- Revenue and bookings over the last 12 months.
- Bookings by status and by service type.

Trending and bestsellers

INSIGHTS › TRENDING & BESTSELLERS

What sells, with your own picks on top.

Booking Report

INSIGHTS › BOOKING REPORT

A report of bookings for a period.

SECTION 9

Integrations

One hub for the other systems you use, with the same look for every category. Credentials are yours alone and stored encrypted.

The integrations hub

TOP BAR › INTEGRATIONS

Eight categories, 27 services.

- Stay OS: Airbnb, Booking.com, Expedia. Exp OS: Wetu, GetYourGuide, Viator. Trans OS: OpenStreetMap, Google Maps. Airline OS: Amadeus, Sabre.
- Sale OS: HubSpot, Pipedrive, Mailchimp. Payments: Stripe, PayPal, Flutterwave, Paystack, M-Pesa, EcoCash.
- Communications: WhatsApp Cloud, Twilio, SendGrid, Mailgun, Claude AI. Fiscal and tax: Fiscalize, KRA iTax, TRA Tanzania.
- Connect, edit credentials, test the connection and disconnect from each card; search and filter within a category; the hub tells you which required services are still missing.

Wetu

INTEGRATIONS › EXP OS

Bring itineraries in.

- Browse your Wetu itineraries, refresh them, and import one as a Tanova trip.

Your website and apps: the API

Everything above is also available to your own website, app or back office, so the portal can be the engine behind your brand.

API keys

SETTINGS › API KEYS

Publishable and secret keys, in test or live mode.

- Scopes let a key do only what it needs (for example read the catalogue, or invoicing).
- Allowed origins decide which websites may use a publishable key.
- Rotate or revoke a key at any time; test mode never touches live data.

API and Website Docs

SETTINGS › API & WEBSITE DOCS

Interactive documentation, always current.

- 216 operations: services, bookings, invoices, customers, loyalty, messages, suppliers, supplier bills, concierge, waitlist, departures, add-ons, analytics, occasions and more.
- Swagger UI, an OpenAPI file and a Postman collection, plus guides for getting started, authentication, idempotency and limits, test mode, webhooks, guest accounts and payments, recipes, and invoicing.
- Safe retries with idempotency keys, clear rate limits and consistent errors.

Webhooks

SETTINGS › API KEYS › WEBHOOKS

Be told the moment something happens.

- Events include booking created, confirmed, paid, cancelled and completed, payment received, refund recorded, travellers submitted, customer created, invoice created, paid and voided.
- Failed deliveries are retried after 1 minute, 5 minutes, 30 minutes, 2 hours and 12 hours.

Safety, privacy and reliability

Your business is separate from every other business on the platform, and your money is recorded in a way that can be checked.

Your data is yours alone

EVERYWHERE

Every list, report and API call is limited to your own business.

One ledger for money

FINANCE

Every payment, refund, supplier payment and payout is written once and never changed.

- A booking, its invoice, the statement and your payout balance always show the same money.
- The ledger is tamper-evident: an entry changed or removed behind the system's back is detected.
- The books are checked against each other every night, and the platform's health check turns red if anything differs.
- Two payments arriving at once are counted one after the other, and a payment that would overpay is refused.

Credentials and keys

EVERYWHERE

Payment-gateway keys and integration credentials are stored encrypted and never shown again; API keys are shown once.

Backups

PLATFORM

The database is backed up every night, with the latest seven kept.

Quick reference: the whole sidebar

Overview	Today
Bookings	Bookings · Departures & seats · Check-In · Waitlist · Customers · Booking History · Enquiry Report
Catalog	Exp OS · Event OS · Stay OS (hotels, spaces) · Trans OS (cars, boats) · Airline OS · Visa OS · Meals · Restaurants · Catalogs · Pricing Tiers · Upsells & Add-ons
Tanova	Marketplace · Itinerary Builder · Inbox · Concierge
Engage	Loyalty · Scheduled Messages · Occasions · Holiday Greetings · Email Campaigns · Coupon · News
Insights	Analytics · Trending & Bestsellers · Booking Report
Finance	My Wallet · Payouts · TourPay (invoices, quotations, bills, reports, settings) · Statement
Settings	Go Live · My Subscription · API Keys · API & Website Docs · Team · Integrations · Operators · AI Planning · Verifications · Two-factor · Help

Also in the top bar: Integrations, Concierge, Tanova and TourPay. Availability of some screens depends on your subscription plan and permissions.
